## Introduction

SteelMint’s credible prices serve as a benchmark for manufacturers, buyers and traders in the steel industry to settle contracts or to understand the market cost of physical supply of commodities. We have created a comprehensive and robust methodology to ensure accurate assessment of commodity prices which are governed by SteelMint’s standards of compliance with the public and our stakeholders.

The listed prices are just the tip of the iceberg that’s visible to everyone. The rationale applied by analysts who work behind the scenes is based on a robust market-appropriate methodology, derived from research and data analysis, to assess prices in varied markets. SteelMint seeks to reflect the way markets are traded, rather than impose any one view on the markets, including its own.

## Why Methodology Matters

**SteelMint** has developed the most reliable price assessment methodologies by implementing the highest standards of price reporting, in compliance with IOSCO principles. We are in the process of aligning our price assessment practices with IOSCO’s Principles for Oil Price Reporting Agencies. These IOSCO-compliant methodologies guide the analysts to be objective in data analysis and helps maintain consistency in price assessments over time and across locations. We also instil confidence in market players due to our steadfast adherence to the main conceptual pillars of IOSCO compliance as under:-

**Periodic Review-** Since market trends are dynamic, we regularly review our methodology to ensure that it is representative of the market being assessed and that it meets the needs of market participants.

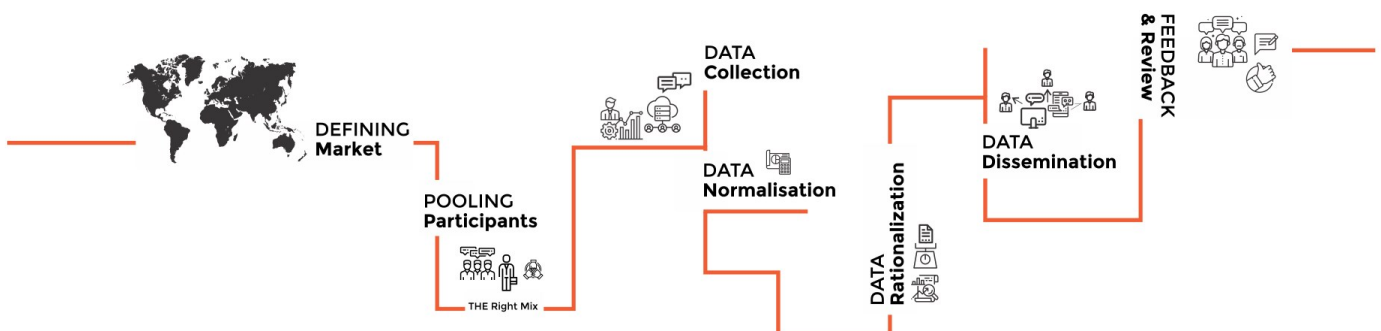

**Transparency** - Transparency and openness in our assessment process is necessary to develop confidence among market players. We have developed detailed methodology documents, which is easily accessible to everyone on our website.

**Consistency** - A well-defined methodology guides the analyst, and new analysts replacing existing ones, in the assessment process, helping them maintain consistency over a period of time and across geographies and regions. With a robust methodology in place, the analysts remain objective and impartial in their price assessments, without any personal biases or prejudices creeping in.

## How It Works

Market data is collected from a wide cross-section of participants, comprehensively analysed and verified for

credibility. Then, based on our rigorous methodology, the final price is published. The overall process could be summarily

outlined as follows:-

### **Data Collection**

**SteelMint** encourages market participants to submit all market data and full circumstances surrounding all reported transactional data (including details of quality, specifications, order sizes etc.) relevant to the assessment being made.

Information is collected and collated from a wide cross section of market participants, including producers, consumers and intermediaries to ensure that there is no undue influence of any side on the price assessment process. We encourage our analysts to collect all types of market data, including but not limited to following:-

- Concluded transactions
- Firm bids
- Firm offers
- Indicative bids and offers
- Tender / Auction results
- Third party data (where applicable)

**Assessing Market Conditions** To develop an accurate understanding of a specific market, a comprehensive analysis of environmental forces, market trends and other factors is done by our analysts to assess the impact of market conditions on specific commodity prices.

**Verification of Market Data** Our experts carefully analyse all the market data submitted for the price assessment process. We apply the highest level of diligence in scrutinising and verifying the data. Our experienced analysts are trained to employ several tests based on the different methodologies employed for each commodity.

**Assessment Principles** SteelMint has developed various price assessment principles based on the nature of the commodity and market conditions which are as follows:-

**Prioritising data-** We have defined the level of priority to be given to different types of market information. For instance, most of the methodologies assign a relatively higher importance to confirmed transactions over bids and offers.

**Transparency-** Wherever possible, we try to publish lists of

deals in our price assessment rationale.

**Minimum volume and transaction data thresholds-** Our methodology establishes the acceptable threshold for every transaction count, minimum volumes or other volumetrically relevant parameters.

**Use of judgment-** Our analysts are adequately experienced and trained to make rationale-based assessments by applying intelligent judgment in situations where transaction information is insufficient, inadequate or non-existent.

**Rationale/Logic-** Our analysts are expected to define the rationale behind their conclusion of deciding the final assessment price. They document, in detail, the factors considered in price assessment and the weightage given to different market data types like transactions, bids, offers etc.

**Publishing a Price-** We have another methodology in place to define publication schedules for each price assessment. SteelMint price assessments and indices are published on the SteelMint website and mobile application. All SteelMint prices are kept in a historical database and available for download. Our complete publication schedule has been given below for more details. The efficiency of our methodology is open for viewing at any time.

## Core Methodology Principles

Our methodologies are rigorous and transparent, ensuring impartial analysis of current market data, including trading practices, buyer/seller price data and in maintaining consistency in rationale application. Some of the major principles guiding the development of every methodology are:-

**Rigorous and Consistent-** Our methodologies have been developed based on research and an extensive study of various markets. We are connected with the market and receive inputs from industry experts and small/large market players on a regular and consistent basis. These methodologies have been consistently applied over time and various assessments.

**Impartial and Independent-** We are completely independent and objective in our price assessment process. Our analysts have no vested interest in the outcome of the price assessment. SteelMint requires all employees to attest to 'Independence Compliance' that may influence or interfere with their ability to perform their jobs in an objective, impartial and effective manner. The compliance team is responsible for ensuring the quality and adherence to SteelMint policies, standards, processes and procedures including checks for adherence to published methodologies.

**Constant Market Feedback-** We work very closely with various markets and keep pace with all the happenings in the market to ensure our methodologies are reflective of the current market trading patterns and practices.

**Balance of Buyer and Seller Data-** Our price assessment takes into account the price data from both buyers and sellers as both are very critical for an accurate representation of market activity. Our assessments also take into consideration data from both large and small market participants.

**Transparency-** Our methodology is open for viewing and feedback is always welcome to facilitate greater transparency and efficiency in physical commodity markets.

**Wide Participation-** SteelMint encourages the participation of a wide range of data providers in the market to compute the best prices. Our analysts are trained to expand their data points and are constantly seeking to increase the number of companies willing to provide market data.

**Training & Development of Analysts-** A vigorous and comprehensive training programme has been designed at SteelMint which all the analysts have to undergo and pass stringent tests before they can be involved in the price discovery process. Only once the Analysts have been well honed in theory as well as on the job training, are they brought into the process.

### How Methodology Benefits Business

With methodology-based price assessments, you will have accurate knowledge of the market and prices, empowering you to negotiate contracts better, increase margins and boost profitability.

**Better Margins and Increased Profitability-** Proper knowledge of the market and market prices can help increase margins and boost profitability for your business in the long run.

**Negotiate Based on Correct Market Prices-** A robust price assessment methodology gives you accurate and credible prices, enabling you to negotiate a contract better.

**No Misleading Information-** Methodology-based pricing reduces the probability of the undue influence of any market variable and negates the chances of bias of an analyst in the price assessment process.

**Rationale-Based Pricing-** Detailing the rationale behind the published prices of commodities helps you understand the various data points and market factors considered in deriving the final price assessment.

### Becoming a Data Point / Partner (DP)

SteelMint continually seeks to increase the number of market sources willing to take part in the price discovery process. The main condition is that contributors should be active participants in the market and have an in depth knowledge about market dynamics regarding that specific commodity.

SteelMint Data Partner Policy provides guidelines defining the high level of data quality and integrity that we expect from contributing organisation providing pricing data. Market participants that wish to provide pricing data and be part of the price discovery process should first read the Data Partner Policy.

All data sources are subject to review before their data submitted is fully taken into account in the pricing process. The aim is to make sure that DPs are trustworthy and have sufficient visibility and understanding of the market to be able to provide viable price data. If you want to become a contributor to SteelMint pricing, or have questions or comments about the methodology and price specifications, please contact SteelMint's Audit and Compliance Officer at [info@steelmint.com](mailto:info@steelmint.com)
